

Panda

A Tiny wearable product companion robot that serve as a portable professional database for field researchers, Revolutionize the process of reading information.

Secondary Insight: Scientists in the field rely on specialized tools like field guides and identification keys for accurate species identification, rather than standard web searches. These resources are essential due to the specific demands of their work.

George ye Design Workshop 2

Primary Insights: 85% of professional respondents expressed strong interest in a portable, AI-powered device for species identification.

Experts emphasized that the device must offer seamless updates, ensuring that the database reflects the latest scientific findings.

Current devices are too cumbersome for fieldwork, reducing the researching efficiency.

Average Index Finger Width:

- Males: Ranges between 18-20 mm
- Females: Slightly 16-17mm

Anthropometric Index Finger Circumference

Class Data: (cm)

- _____ -5.75
- _____ -6.5
- _____ -5.88
- _____ -6.4
- _____ -6
- _____ -5.8

Model that exploring the natural leave form

Bigger size ring made for the margin finger size

Study Model

Models explores the best possible rough development of form, providing data and guidance on user testing.

Accurate Image & Species Recognition

User-Friendly Interface

Voice speaker for instant hearing

Robust Professional Database Integration

User Testing

Think of tighten it to prevent falling

Bit smaller for tightening

It fits me perfectly

I want a solution that fits extreme size difference
